1.Course Outline

This course is designed to help students to understand various international trade policies that countries implement to deal with the trade issues they face. The course will deal with the causes and effects of various trade policies that promote and/or restrict international trade, including tariff and non-tariff barriers, import restrictions, export subsidies, free trade agreements, contributions of international trade to economic development, policies for multinational firms, the relations between domestic economic policies and trade policies. Moreover, this course will explore the realities of international trade policies of various major countries and regions. Besides, this course will introduce basics of international trade theories as a foundation for understanding international trade policies.

2. Objectives

The objective of this course is to understand international trade policy tools, the ways that they work, and their effects, as well as basic theoretical principles of international trade. Specifically, the students are requested to gain basic knowledges to understand and analyze the logics of, and policies to, various recent international trade issues, including trade barriers and the international efforts to dismantle them, causes of trade disputes and the ways to settle them, progress of regional economic blocs and the optimal policy responses to it, increasing unemployment resulting form globalization and the governments' policy measures to deal with it, the role of international trade in fostering economic reforms in transition economies, trade policies for long-term economic development, and so on.
